

***** Must have TS / SCI with Polygraph to be considered for this opportunity. *****

As our Technical Systems Analyst you will need **both** consulting skills and technical savvy.

Using your consulting skills you will:

- Coordinator multiple project teams to ensure enterprise-wide integration of re-engineering efforts
- Develop creative solutions based on your examination of client requirements.
- Provide group facilitation, interviewing, training, and provides additional types of knowledge transfer.
- Use Project Management Framework to guide efforts to on time completion.

Using your technical savvy you will:

- Design and implement systems, network configurations, and network architecture, including hardware and software technology, site locations, and integration of technologies.
- Maintain needed files by adding and deleting files on the network server and backing up files to guarantee their safety in the event of problems with the network
- Identify and determine equipment, software and procedural solutions using both process and data modeling.
- Analyze / recommend commercial software, may supervise software developers.

To be considered you will have experience with most if not all of the following:

- 5 + years of experience working in IT / Networking environments
- 2 + years using PMF, MS Project and/or Visio to monitor progress, ensure on time completion of projects, communicate status to all shareholders..
- Proven competence integrating infrastructure components in the areas of Active Directory, Networking, and related deployment issues.
- Operating familiarity with server/workstation operating systems (Windows & UNIX), application software (Lotus Notes, MS Office, etc.),

Required Education:

- Bachelor's Degree or higher in Business Systems or related field of study with at least 4 years applicable experience.
- ITIL or PMP certification is a plus!
