

ETL Developer opening for immediate hire!

**\*\*\* Must have TS / SCI with Polygraph to be considered for this opportunity. \*\*\***

In support of an existing program the ETL developer will be expected to create system components that will extract, transform, and load data from several disparate, structured and non-structured data sets. Understanding of Agile methods is a must. The selected candidate will have an expert understanding of database methodologies and normalization techniques.

**Additional responsibilities will include:**

- Analyzing, designing, building, testing, implementing and full life cycle support of ETL solutions for multiple subject areas sourced from disparate data sources.
- Develop mappings for Data Capture, Staging, Cleansing, Transforming, Loading, and Auditing.
- Excellent communication skills are required for this client facing position

**To be considered you will have experience with most if not all of the following:**

- 4 + years experience of database design in major Relational Data Management Systems (e.g. MySQL, SQL Server, Oracle, Sybase, DB2, Netezza, PostGRES, etc.)
- 2+ years experience as an ETL Developer
- 2+ years using formal data modeling methodologies, DW Information Supply Chain (ISC), BioAPI, CBEFF, and ANSI Standards and best practices.
- 2+ years experience in multiple programming languages (e.g. Java, C++, etc..)

**Required Education:**

- Bachelor's Degree or higher in IT related field of study with at least 4 years applicable experience.
- Experience with Pentaho is a plus!

**For immediate consideration please submit resumes to:**
