

VMware Engineer

***** Must have TS / SCI with Polygraph to be considered for this opportunity. *****

Our VMware Engineer will plan and implement new VMware configurations and migrations; evaluate and improve existing VMware configurations; resolve operational issues and engineer improvements; set strategic policy and define applicable operational practices. This is a high visibility, high priority effort which demands outstanding communication skills for this client facing position. Preference will be given to Certified VCP (VMware Certified Professional).

To be considered you will have experience with most if not all of the following:

- VMWare ESX/vSphere v4/v5 with emphasis on site recovery and knowledge of various vendor SRA's.
- System design, build, and deployment of server hardware and software components.
- Multi-tiered application environments, including their design, implementation, and capacity/scaling challenges.
- Third party software installation, kernel configuration, file system and volume group management, performance tuning
- Will be responsible for capacity planning and disaster recovery.
- Microsoft Qualifications/Certification is a plus

Required Education:

- Bachelor's Degree or higher in IT related field of study with at least 8 years applicable experience implementing virtualization tools and concepts (VMware, XEN, Hyper-V, Platespin, etc.).
- Preference will be given to Certified VCP (VMware Certified Professional)

For immediate consideration please submit resumes to:
